

Sounding Different, but Still Equal?

Assessing Discrimination against “Audible Minority” Experts in Urban and non-Urban Settings in Quebec and Ontario

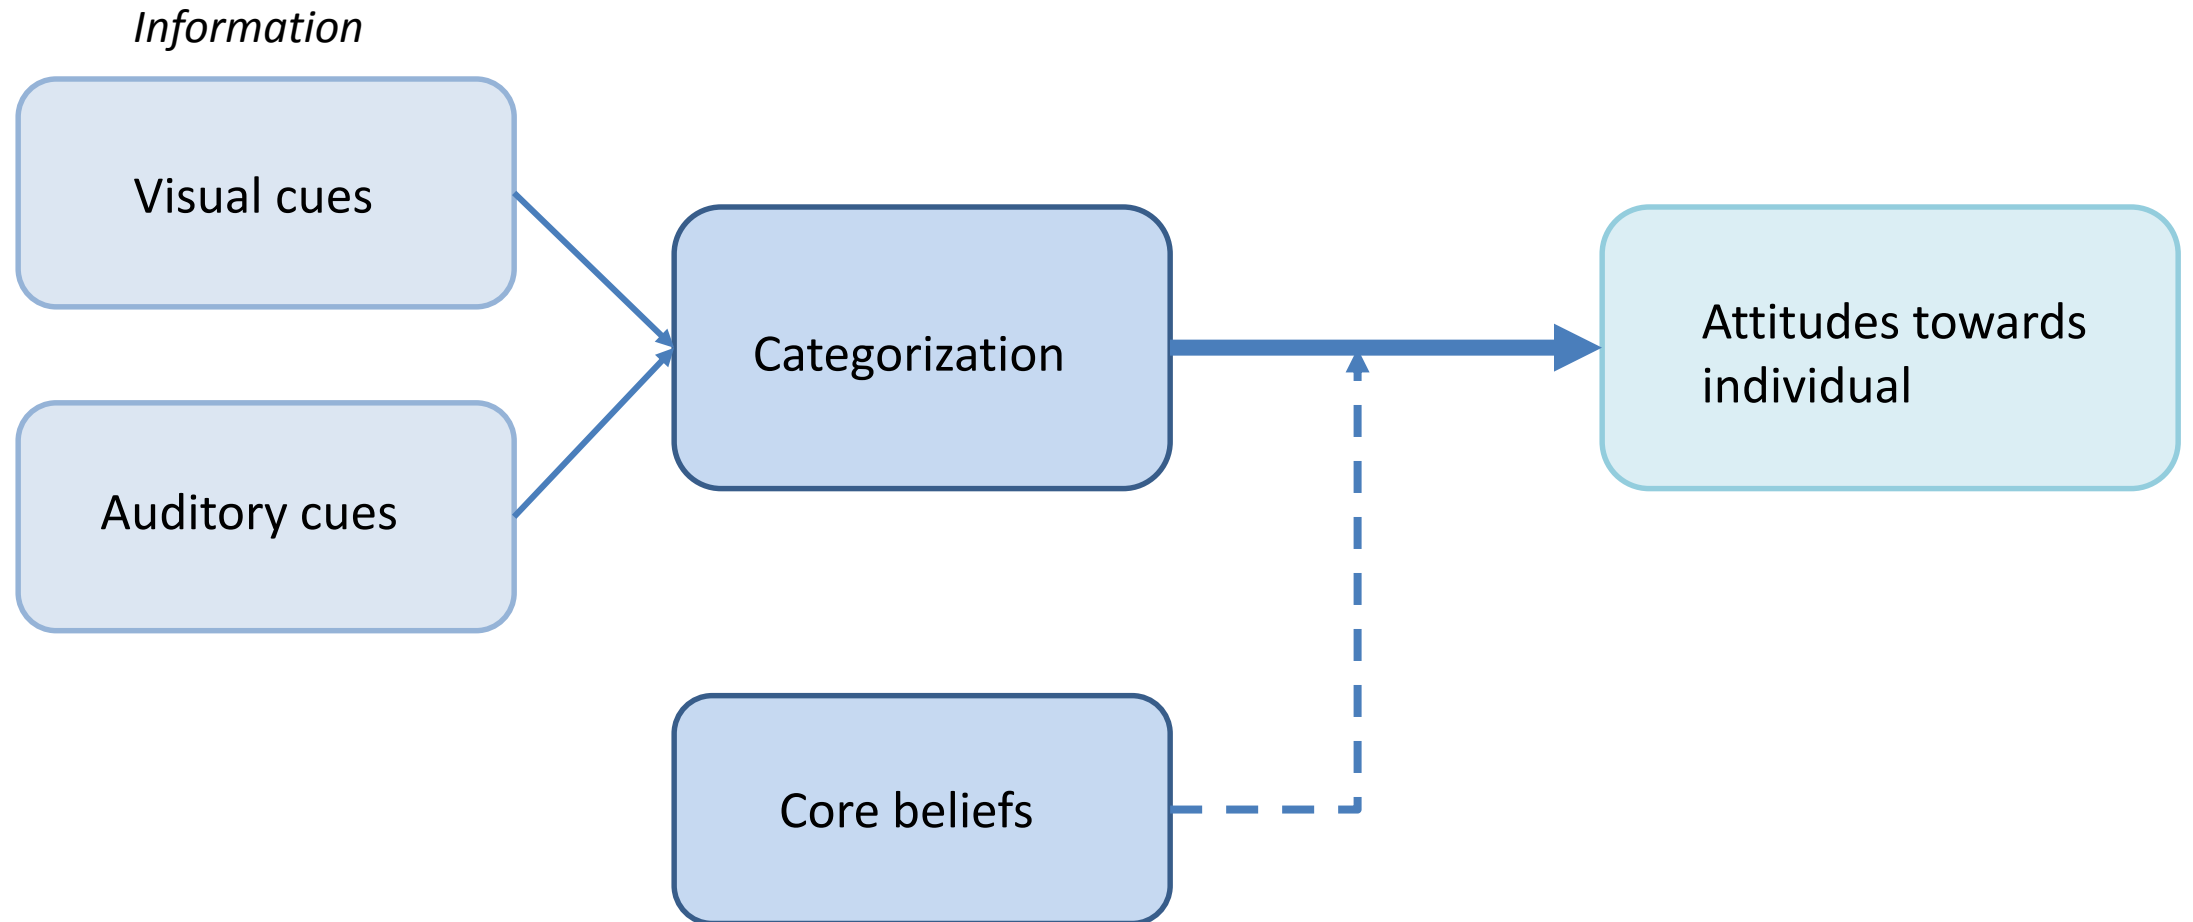

Jean-Philippe Gauvin

Antoine Bilodeau

The Context

- Several documented obstacles to migrant inclusion
 - Foreign sounding names make it harder to get a job
 - Visible minority status also affect perceptions
- What about “auditory cues”, what about accent bias?
- Our question:
 - How do **visual** and **auditory** cues interact to affect how people view immigrants?

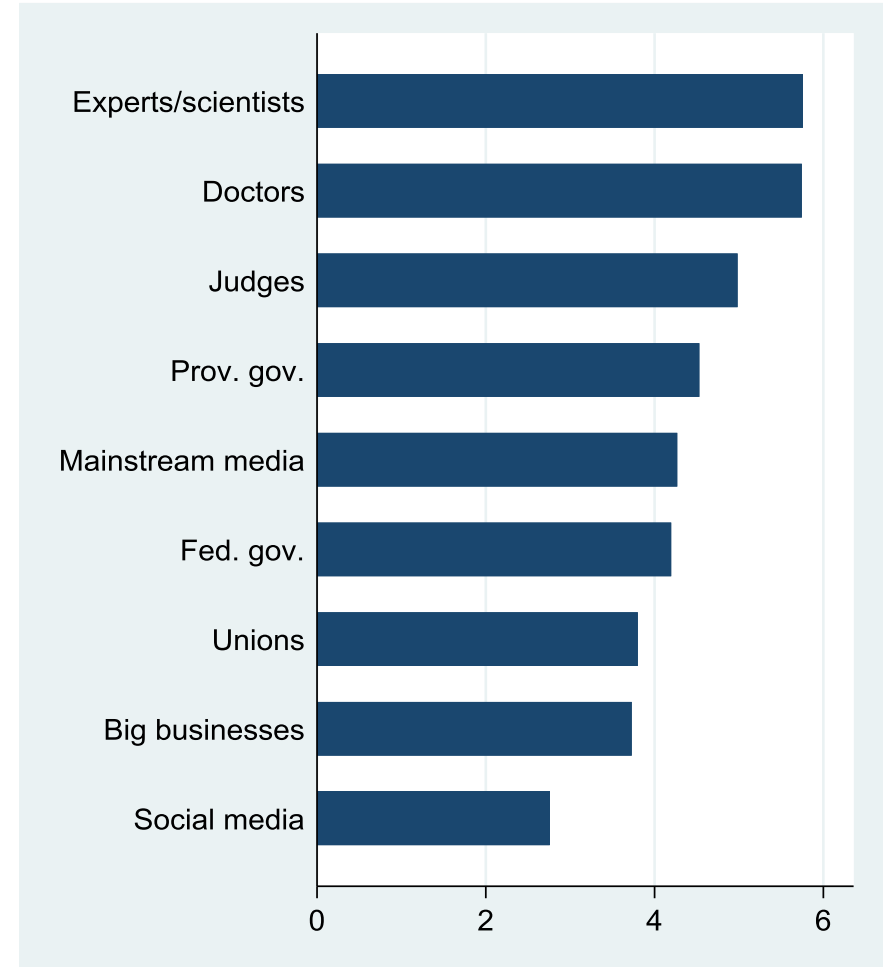

The Process of Categorization

Research question and rationale

- Do ethnic cues influence our perceptions of expert credibility?
- What core beliefs?
 - Conception of the boundaries of identity
 - Ontario vs. Quebec

In general, how much would you say you trust ...?

The Survey

- Web survey fielded in June 2021
- 2200 respondents: white, born in Canada, Eng/Fr first language
 - 1200 from Ontario (40% GTA, 60% rest of province)
 - 1200 from Quebec (40% GM, 60% rest of province)
- One experiment:
 - varying accent/color for a climate change expert
- Several sets of DV:
 - Expert/message credibility**, support for measures, and recall

Climate Change Expert

*The solution to meet Canada's climate targets is simple: **increase taxes on carbon-based fuels.***

*Right now, the Canadian economy is still too dependent on fossil fuels. We're talking about 85% of greenhouse gas emissions that come from the energy sector, that's **600 megatonnes** a year just for one sector.*

*The **World Bank**, the **OECD** and the **IMF**, even the **UN** secretary-general, all the international bodies agree: To curb these emissions and phase out fossil fuels, we need a strong economic deterrent, and that comes from putting a price on carbon. The carbon tax is the easiest way: you put a tax rate on emissions or on the carbon content of fossil fuels. It's the simplest method, that's the advantage of a tax.*

Experimental design

“How can we meet Canada’s climate goals?”

Interview excerpt with Dr. Barda, Professor of Public Policy

Mainstream accent

600 respondents (300 + 300)

Armenian accent

600 respondents (300 + 300)

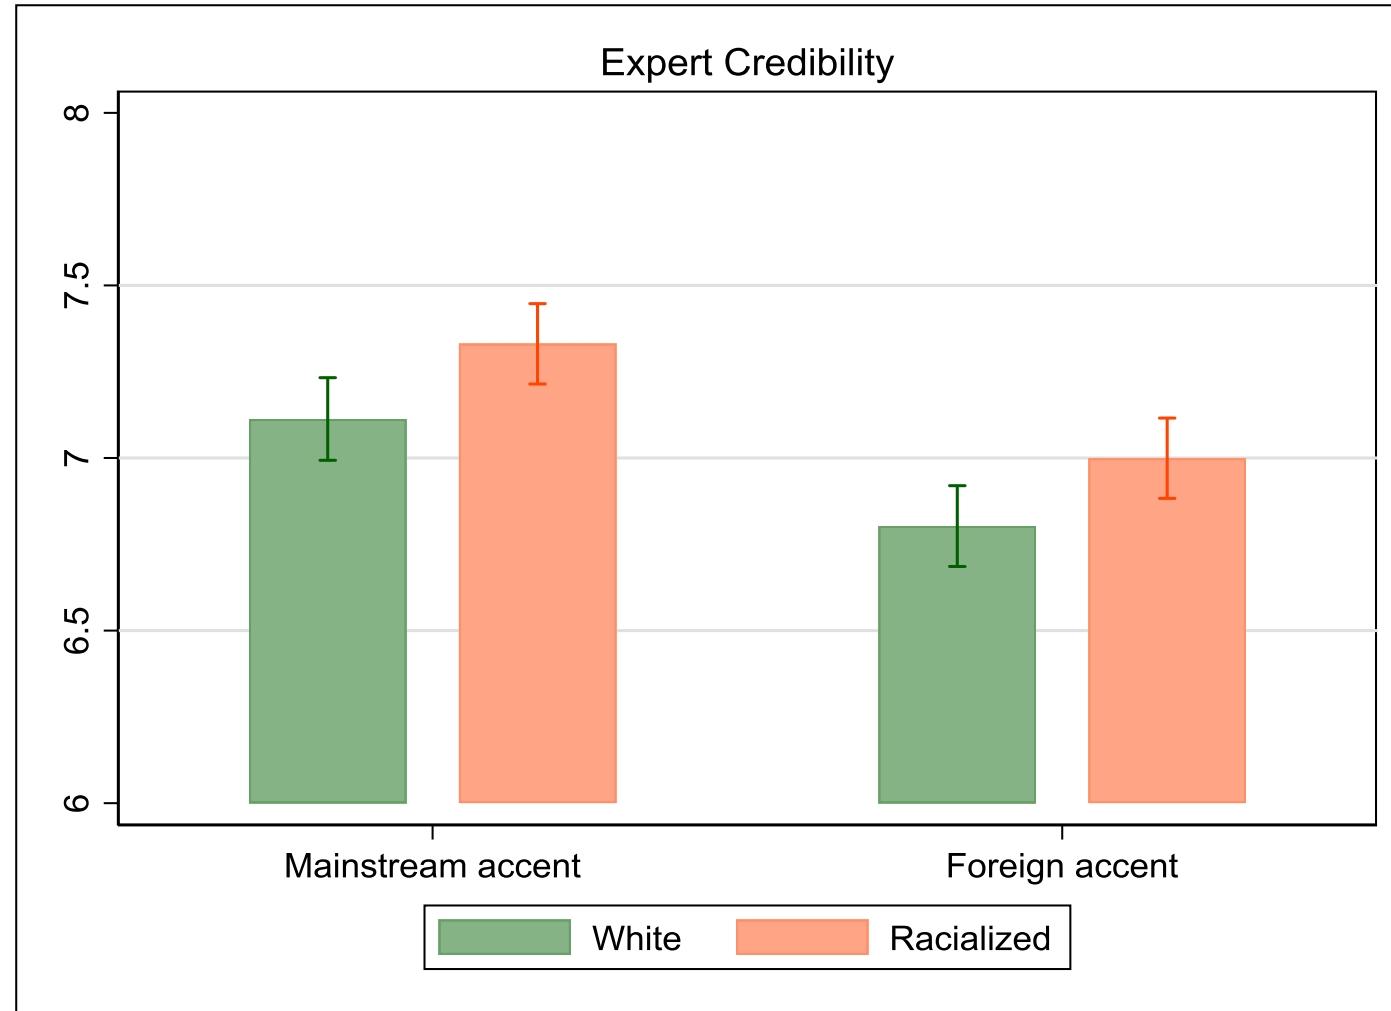

Mainstream accent

600 respondents (300 + 300)

Togolese accent

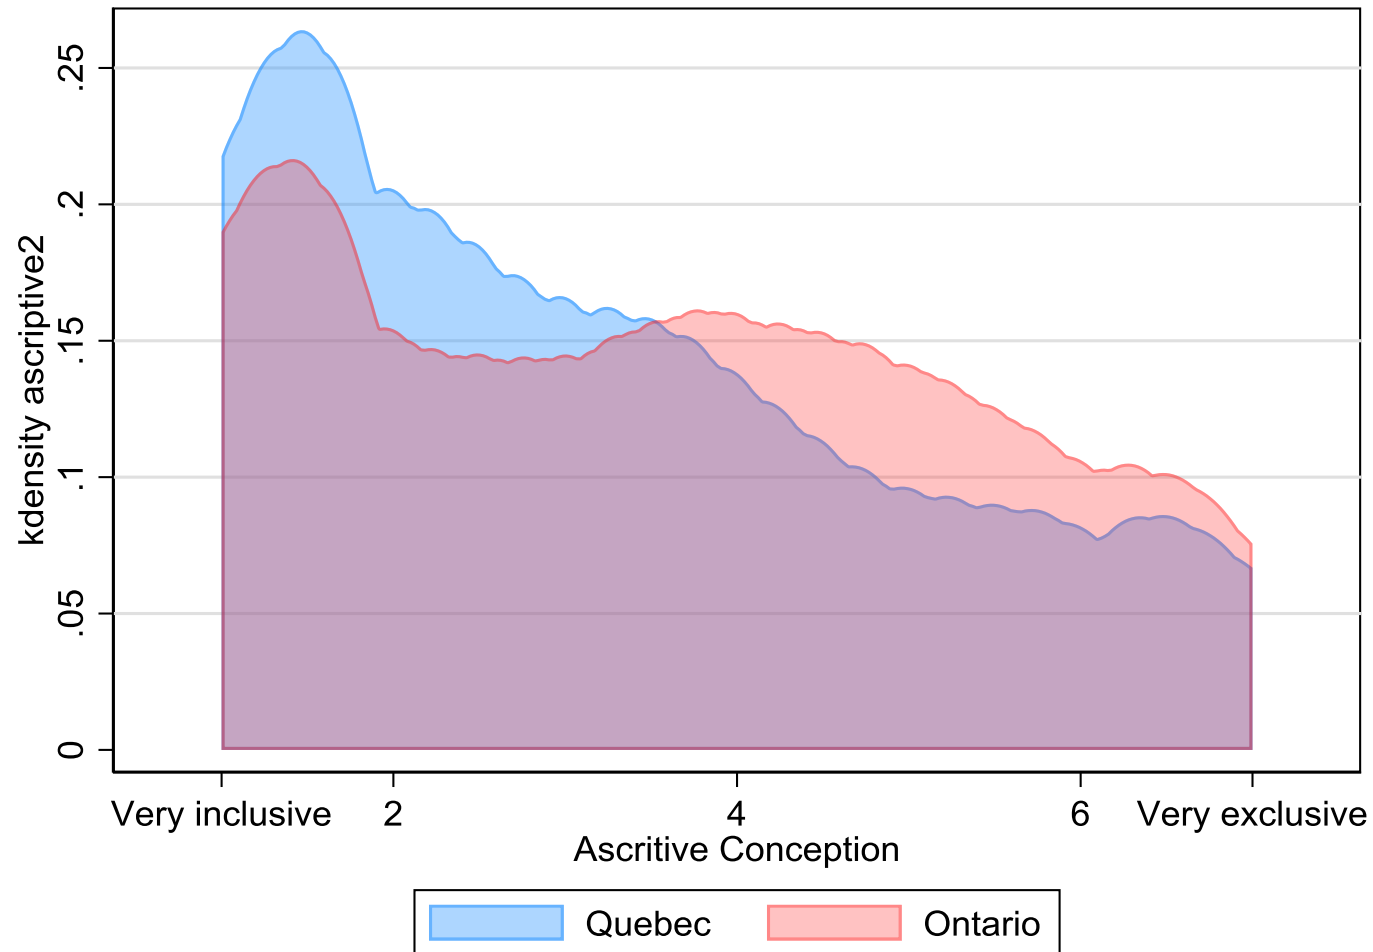

600 respondents (300 + 300)

Expert Credibility Results

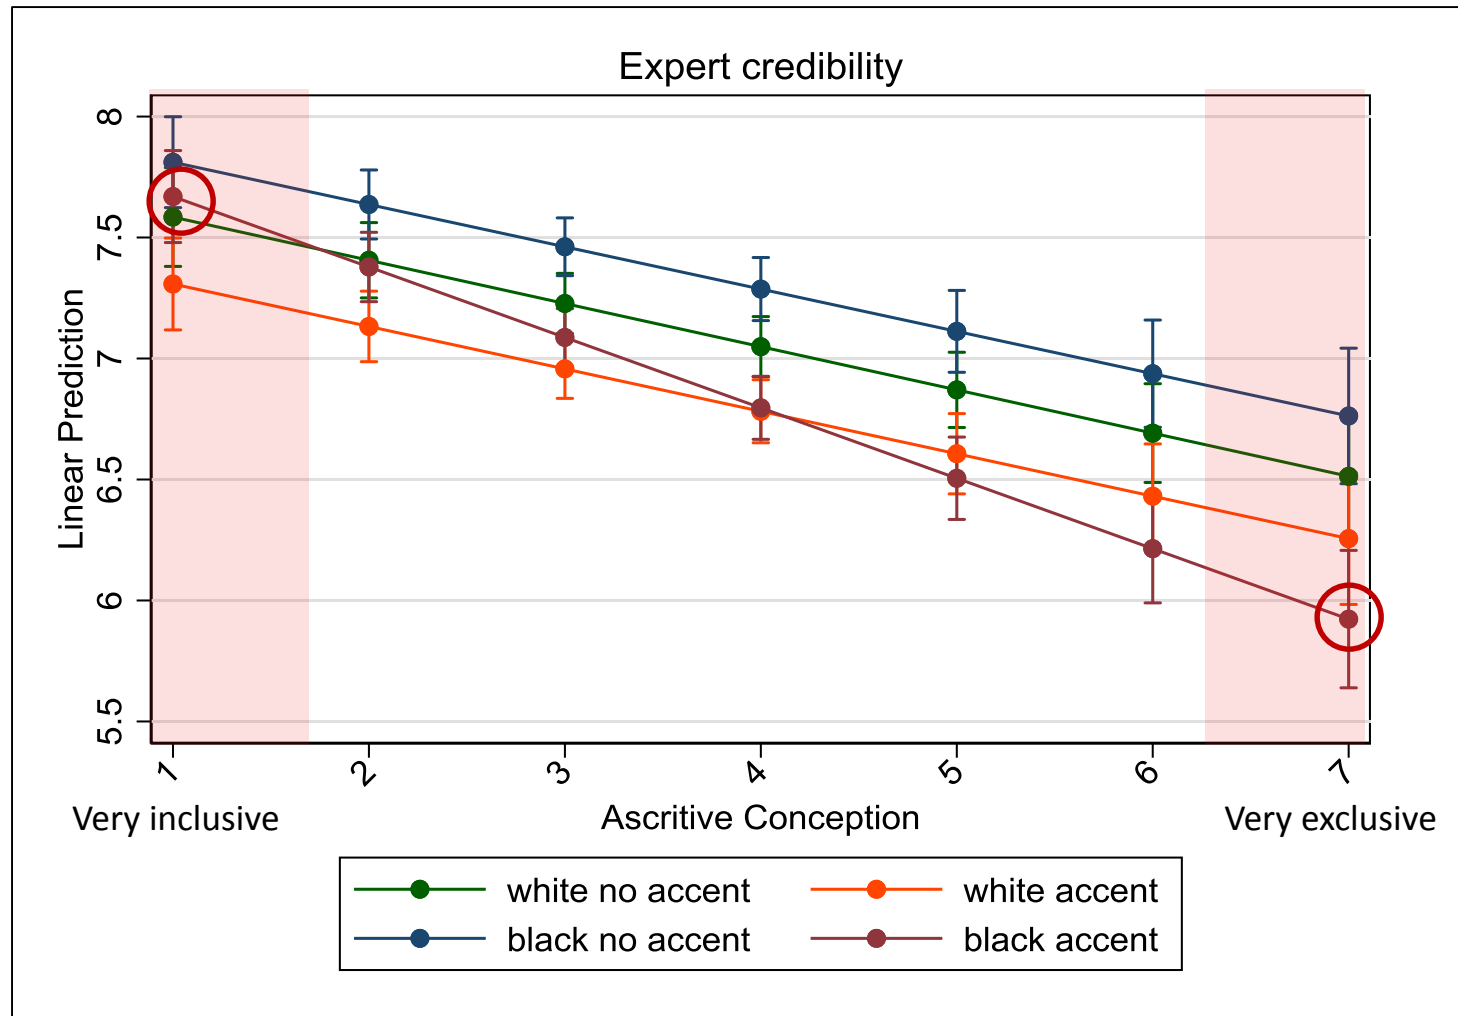

What about core beliefs? (conception of identity)

*Example of completely ascriptive (rigid):
“Only those born in Canada are real Canadians”.*

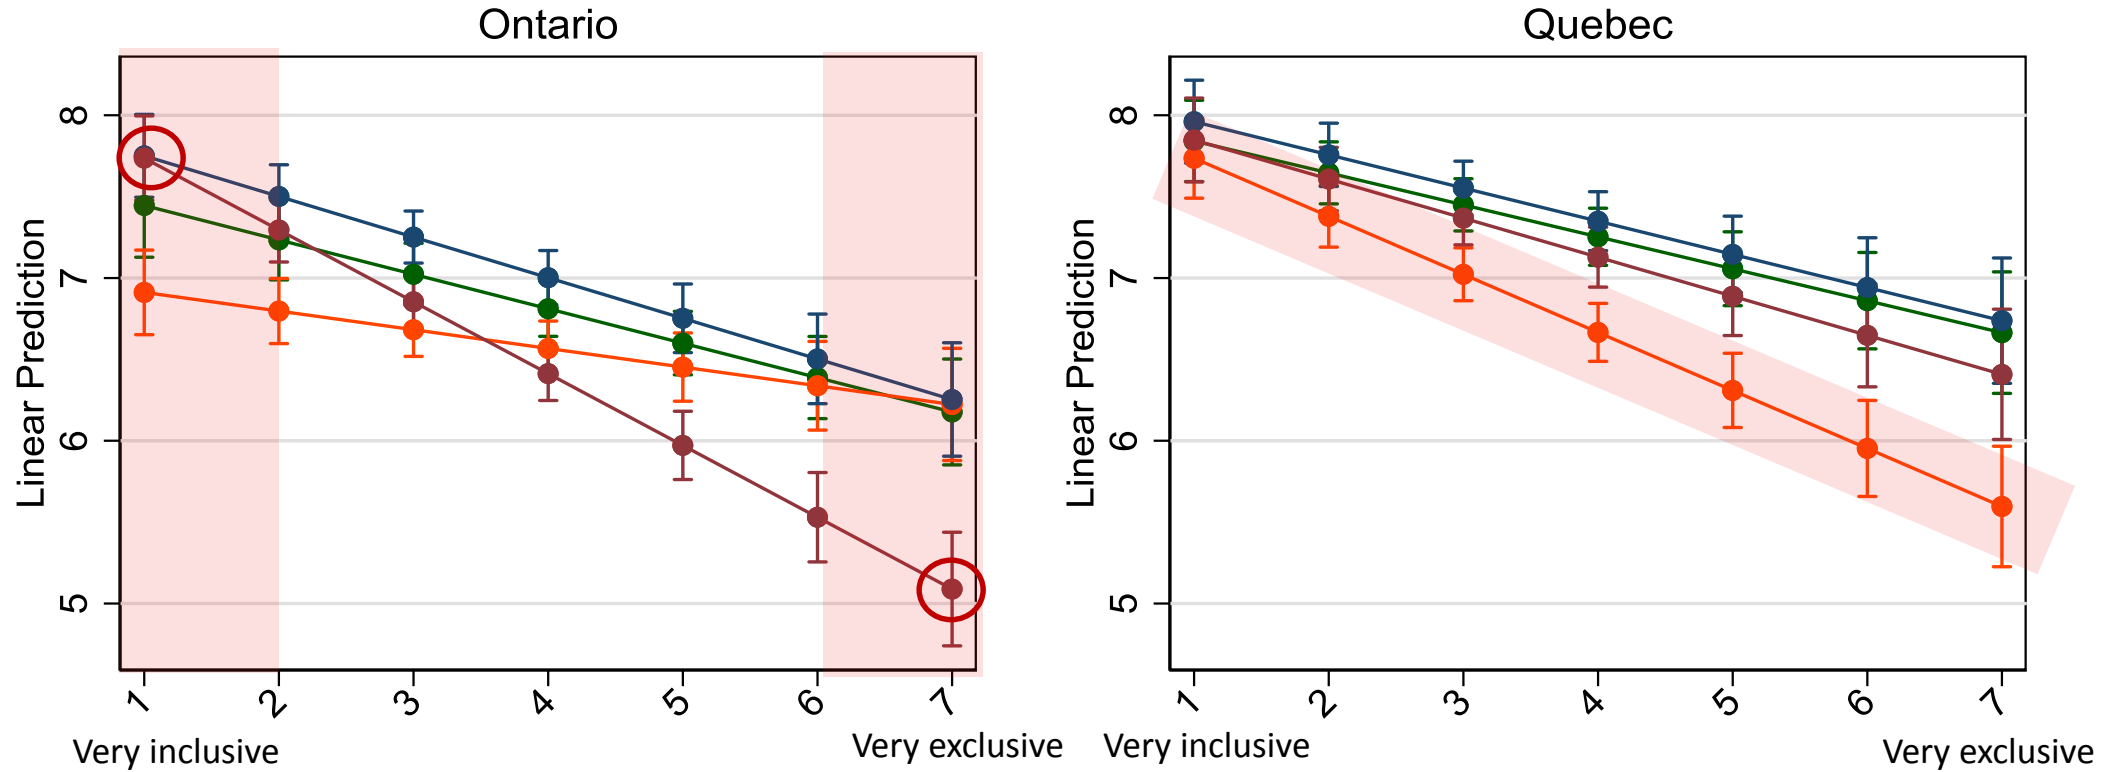

What about core beliefs? (conception of identity)

Example of completely ascriptive (rigid):
"Only those born in Canada are real Canadians".

By province

Conclusions

- Accents affect perceptions of credibility
- This is conditioned by conception of identity and **region**
 - **Ontario:** Racialized experts with foreign accents are the most penalized
 - **Quebec:** White experts with foreign accents are the most penalized
- How does this fit with our understanding of multiculturalism?
